

EDAG MOTORRAD OVERALL

TWO- AND THREE
WHEELER DEVELOPMENT
AT ITS HIGHEST LEVEL

**YOUR GLOBAL MOBILITY
ENGINEERING EXPERTS**

EDAG Motorrad is covering the whole development range of conventional and electrified two- and three-wheeler development as a specialised field of the **EDAG Group**. In several hundred projects of varying complexities, the motorcycle development team established a very good reputation in the international two-wheeler industry.

Along with the development of **components, modules and complete vehicles**, we produce **prototype vehicles and -parts**, which we afterwards validate on our **test facilities** and / or on **proving grounds or racetracks** in test operation.

As a **general contractor**, we successfully took several independent projects in series.

With our high **flexibility** and **development quality** – and not least because we speak the **language of the two-wheeler industry** –, we evolved to one of the **leading development partner** in the two-wheeler industry.

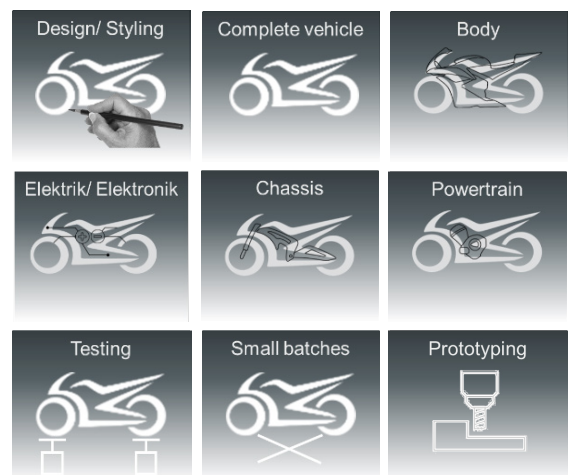

We will gladly support you with the efficient implementation of your two- or three-wheel projects! Convince yourself of our development know-how on our homepage:

<https://www.edag.com/en/industries/motorcycle>
or contact us directly: motorrad@edag.com

Our performances for the two- and three-wheel industry:

- Design / styling
- Concepts
- Development / design
- Validation (virtual / hardware)
- Testing / test team
- Prototypes and small series production
