

FROM SCRATCH TO REALISATION

TECHNICAL SUPPORT
FROM NOMINATION TO
START OF PRODUCTION

YOUR GLOBAL MOBILITY ENGINEERING EXPERTS

Developing technical products and getting them into serial production is what we do!

EDAG accompanies all the major OEMs and startup companies from an early development stage until series production. Within the scope of our commission, we will take on all tasks, and if required, even the role of the design release engineer for the OEM.

In EDAG, you will find an experienced partner who will provide assistance and support for your processes and products.

Concept to SOP + 3 months

Particularly in the period from nomination to start of production, there are many things that need to be taken into account.

Regular coordination with the customer's technical development team, the exchange of product data in accordance with customer requirements, the necessary tests to ensure legal compliance or compliance with customer specifications.

Let our experienced staff support you: we will be happy to advise you and draw up a quotation for you.

Our services at a glance:

- Technical consulting, e.g. from the concept to SOP + 3 months
- Central contacts for all disciplines (German/English speakers)
- Requirement engineering (RE)
- Design, engineering, drawing and data management (e.g.: CATIA, UG-NX, Connect, etc.)
- Testing components, assemblies, but also complete vehicles in our accredited test centres
- Test reports in customer quality
- Adaptation management to all OEM processes

In a nutshell:

EDAG is your one-stop partner for the validation of your development.
